

FLAGSHIP OF SENSOR SANITARY WARE INDUSTRY

# Do it better

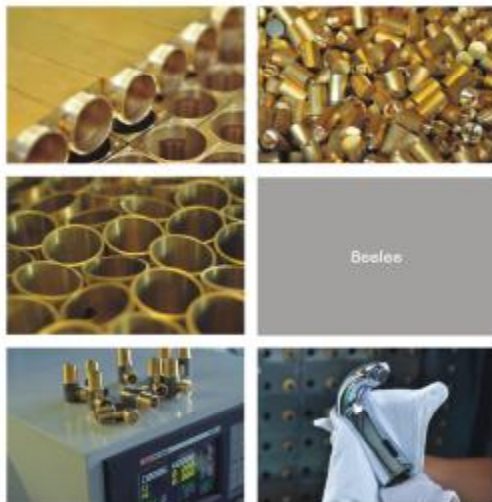

Beta's Ceramic Sensors are essential components in high performance water management systems. They are essential for high performance water management systems. The ceramic and biological properties of sensors are carefully selected through research and development and tested through rigorous testing. This is the result of 30 years of experience in technology.

## Brief Introduction

Winfresh Beta Sanitary Ware Co., Ltd. is a specialized manufacturer of sanitary ware with professional technology and strong output capabilities. Our main products are basin faucets, LED faucets, thermostatic mixer, sensor faucets and bidet/flusher sanitary wares. Our products have modern styles and unique designs and are an excellent choice for hotels, villas and houses. We understand that each customer has a distinctive definition of the perfect faucet. That's why our faucets are offered in a variety of handcrafted designs, colors and finishes. Whether the kitchen or bathroom door reflects a traditional or contemporary aesthetic, our faucets provide exceptional design solutions to accommodate individual preferences. There is no substitute for the reliable performance ensured by our ceramic disc valve or the authentic beauty of our hand-brushed faucet finishes. The experience is bold. The experience is art.

**We have export our products to Germany, UK, Holland, Poland, Norway, USA and Canada.**

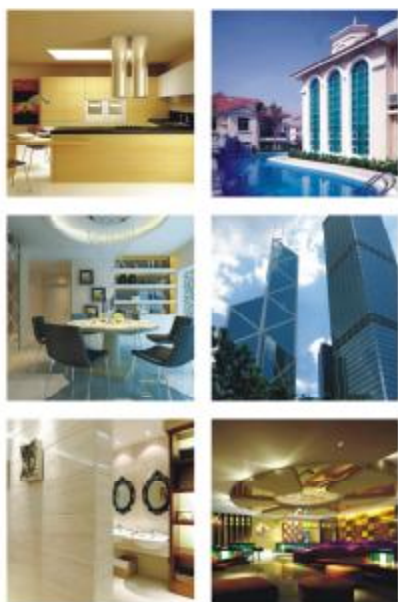

We continuously develop new styles according to international standards and our strict quality control system. We have CE, EMC, UPC, Watermark, Rohs and LFGB standards for our products. We are constantly developing new styles to international standards under strict quality control and have full confidence in the quality and innovation in sanitary ware products. As one of the leading bidet faucet manufacturers in China, we are looking forward to your cooperation.

## WE WORK TOGETHER

to create brilliant Beelee Sanitary Wares

At the beginning of almost every Beta sensor faucet there is a sand core made from quartz sand which forms the hollow space of the resulting faucet. The blanks are produced from brass bars at around 1200 degrees centrifuged in the permanent mould. Following mechanical processing the faucets are machined and polished on a robot production line passing through buffer stations before they are finally chrome-plated by galvanic equipment then assembled on the production line and packed ready for shipment.

AS A PROFESSIONAL SANITARY WARE COMPANY:

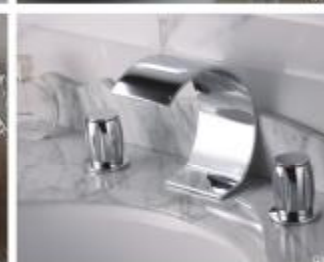

**YES, MAKE IT BETTER**

**ENJOY THE WATER**

We try to make each hole sanitary more better.

**ew sensor technology for all the world**

- › It is very special new waterfall mixer

Water is made of H<sub>2</sub>O. H is hydrogen and O is oxygen. When the LED color is changed by water temperature, the color of the water changes. This is a natural phenomenon. The color of the water changes depending on the water temperature. Blue is cold, green is warm, red is hot, and white is room temperature. The color of the water changes depending on the water temperature. Blue is cold, green is warm, red is hot, and white is room temperature. Recommendation from professional: Make the water flow rate recommended in professional standard  
 to reduce the risk of water pipe or a general solution is a water saving tap or water tap.

LED color will only be visible when the water is running out. This is to avoid unnecessary environmental noise like light unnecessarily changing appearance  
 on the main impression. Also when the water is cold, green water and green hot and flashing red when hot or very hot.
